

light setting

Lighting settings

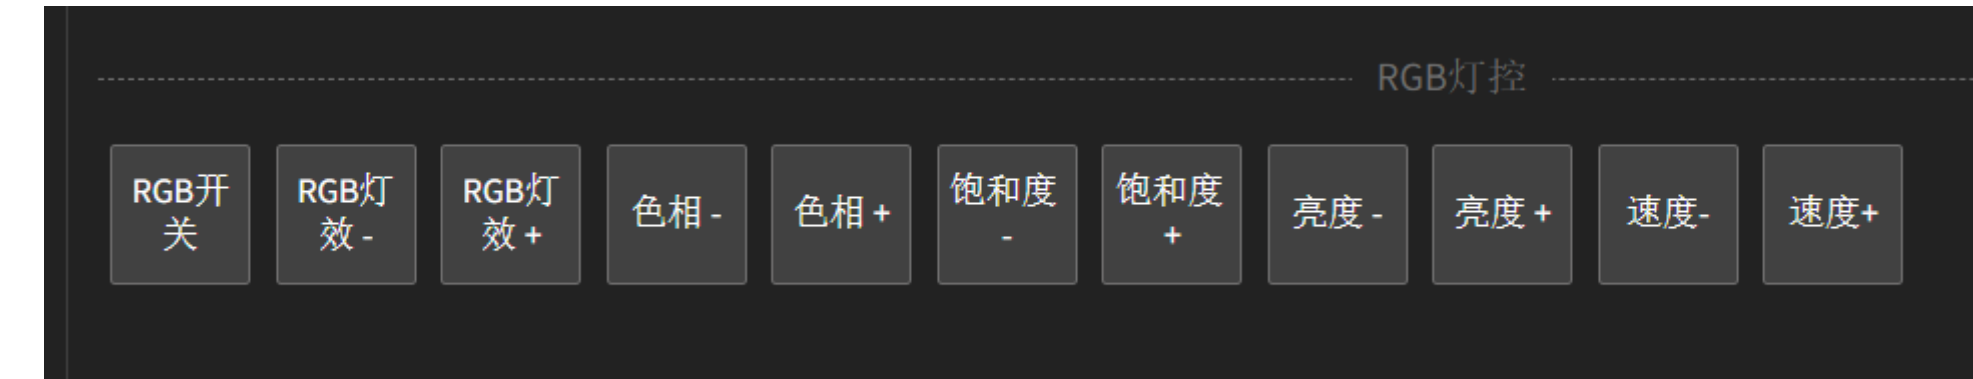

🔍

- 📘

CXT keyboard provides lighting effect function, and provides corresponding setting page in VIA-C
- ▶ Enter the lighting effect management page, you can adjust the lighting brightness, lighting effect, and lighting color. After the adjustment, it will take effect immediately, no need to save or write, and it will not be lost after restarting

light control key

- 📘

In addition to using VIA-C's light effect management, you can also use the light control key to set the keyboard light
- ▶ Provides key values such as switch, lighting effect switching, hue, saturation, brightness, speed, etc. After setting the key, press the key to control the keyboard light
