Surface Dial Simulation Tutorial

> The CXT keyboard supports emulation as a Surface Dial controller, but due to hardware limitations, it does not support functions such as color rings that need to be attached to the screen to achieve.
>
> Surface Dial only supports Windows 10 and above systems, not Mac OS, Linux, Win8 and below systems.

key value settings

VIA-C version 0.2.2 or later supports Surface Dial simulation, which includes support for Surface Dial's four actions of " 左旋 "," 右旋 "," 单击 ", and " ". 长按

Among them, the key-value map contains the SURFACE DIAL key-value list.

It contains S按钮 , S旋转+ , S旋转- three key values, which can be set to the knob to realize Surface Dial simulation, as shown in the figure below:

After being set on the knob, the S button includes two operations of single click and long press at the same time, a short press triggers a single click, and a long press triggers a long press, that is, the Surface Dial roulette menu is called out.

Surface Dial Settings

To customize Surface Dial, click the Win icon in the lower left corner of the system tray, and then select " 设置 " > " 设备 " > " 轮盘 ".

default function
